SEMESTER 4

Mid Course Project

Topic – SMART ROOM automation system for remote monitoring using CISCO PACKET TRACKER.

TEAM MEMBERS

RENUBALA SHADANGI – 23BEEN0025

KULDEEP – 23BEEN0029

KUMKUM SHADANGI - 23BEEN0024

AIM

Develop a room automation system for remote monitoring to automatically manage fan and floor lamp.

PROBLEM STATEMENT

Without Smart room monitoring system there are following issues:

- 1.Lack of real time monitoring – Users cannot remotely operate the fan and floor lamp.
- 2.Energy inefficiency- Appliances like fan and lamp might remain on which will consume a lot of energy until the user will return and switch it off.

SCOPE OF SOLUTION

- 1.Remote accessibility of floor lamp and fan for user.
- 2.Reduced energy wastage through automation.
- 3.It is scalable, cost effective and user friendly.

REQUIRED COMPONENTS

Software-

Cisco Packet Tracker.

Hardware components-

SMART FAN

SMART LAMP

LAPTOP/ SMART PHONE

WIRELESS ROUTER

SWITCH

SERVER

SIMULATED CIRCUIT
